# United Kingdom on Shortwave

## Transmissions from Woofferton (Shropshire) 02.43W 52.19N

The Woofferton Transmitting Station is located about three miles south-south west of Ludlow in Shropshire, near to the Shropshire-Herefordshire border. It is owned and operated by Babcock Media Services, a division of Babcock International Group PLC. The site consists of six 250 kW and four 300 kW shortwave transmitters. It is the last remaining shortwave transmitter site in the United Kingdom following the closure of Rampisham and Skelton. In addition, the North Herefordshire mediumwave relay of BBC Hereford and Worcester is located at this site, operating on 1584 kHz with 500 Watts.

**Woofferton Transmitting Station schedule for the A-18 season effective 25 March to 28 October 2018**

Entries in blue denote a transmission in DRM

## **British DX Club visit to Woofferton (October 2017)**

In October 2017, twenty BDXC members gathered at Woofferton for a much anticipated tour of the transmitter site. Read the report by Alan Pennington of this enjoyable day here: <http://www.bdxc.org.uk/woofferton.pdf> (this article originally appeared in Communication in November 2017)

---

## **Reflections on the BBC transmitting station at Woofferton by Alan Hardy (June 1994)**

The BBC Transmitting Site at Woofferton first came into operation in 1943 as a result of wartime expansion in external broadcasting. Initially, there were six 50 kW shortwave transmitters with aerial systems beamed in several directions, directed by the needs of the time.

The BBC Transmitting Site at Woofferton first came into operation in 1943 as a result of wartime expansion in external broadcasting. Initially, there were six 50 kW shortwave transmitters with aerial systems beamed in several directions, directed by the needs of the time.

The Woofferton site is located 52°18'N or about three miles south-south west of Ludlow in Shropshire, near to the Shropshire-Herefordshire border. Quite an area in now covered by the array of aerials on the site, which cater for the six 250 kW and four 300 kW transmitters used for shortwave broadcasting. In addition, the BBC South Shropshire relay of Radio Shropshire is located at this site, operating on 1584 kHz with 500 Watts.

After the end of the Second World War, and at the beginning of the Cold War era in 1948, Woofferton became the site of the Voice of America shortwave operations in the UK. The transmitters were operated by the BBC on behalf of the VOA ( the first VOA broadcasts from the UK took place over BBC long and mediumwave transmitters in February 1942).

The Woofferton site was an early example of shortwave transmitting sites outside of the US which could get a stronger signal into target areas this side of the Atlantic because of greater nearness. From Woofferton, two networks were developed; the 'Blue Stars' and the 'Grey Stars', which combined broadcast in total about sixteen hours a day. The target areas were Central and Eastern Europe, the Balkans and Near East, plus European Russia. Latterly, broadcasts to Africa were also made from Woofferton.

Over the years, VOA has introduced and expanded other sites in Europe and North Africa which has reduced Woofferton's present output to a level less than has been seen in the past. Indeed, with the collapse of Communism in recent years, former RFE/RL transmitters at Gloria in Portugal have become available to VOA and a new site in Morocco has been set up, perhaps at the expense of Woofferton. With this, though, the BBC has filled available airtime with a few relays of Radio Japan and Radio Canada International in addition to its own transmissions.

However, VOA still broadcasts some vital output from Woofferton. The schedule on the opposite page lists several frequencies for the Serbian and Croatian services, beamed to the war-torn former-Yugoslavia, and some transmissions in languages of the former-Soviet Union also originate from Woofferton.

Living in Knighton, 18 miles west-north west of Woofferton, it gives the writer a good opportunity to listen to groundwave from this site. Reception is best during summer months when the lower shortwave frequencies tend not to be used or don't propagate well to the UK as when they do for the rest of the year. 6040 kHz is a good example between 1630-2200, offering excellent reception in summer with only a half-length telescopic aerial on my radio-cassette comparable, say, to Radio 4 on longwave.

As to the future of Woofferton, we will have to wait and see. Perhaps there will be more in the way of relays from Radio Japan and CBC, and others as well in this era of relay exchanges. VOA's output may also be dictated by world affairs, so further changes in the number of hours used from Woofferton may take place. Whatever the outcome, VOA's association with the site will be fondly remembered.

Alan Hardy - June 1994 (this article originally appeared in Communication in July 1994)

## Focus on the BBC at Woofferton by Alan Hardy (August 1998)

The origin of the BBC transmitter site at Woofferton goes back to 1943. Woofferton itself is a village on the A49 between Ludlow and Hereford, three miles south of Ludlow and twenty two north of Hereford. The actual transmitting site sits astride the Herefordshire-Shropshire border, the complex stretching from Shropshire into Herefordshire.

In 1943, on response to the radio expansion of the BBC's external services, the site at Woofferton came into being. The initial complement of transmitters consisted of six 50 kW units. By April 30th 1944, the BBC's external services had reached their wartime peak with 35 shortwave transmitters in use, plus three mediumwave transmitters and one longwave transmitter. These were used for three European services and two Overseas services.

By the end of the war, there was over-capacity and in 1948 the transmitters were operated by the BBC to relay Voice of America programmes. In effect, Woofferton became a VOA relay site, similar to Munich, Tangier and Salonica.

Over the years, the initial 50 kW transmitters were replaced by 100 kW units, until the current complement of six 250 kW and four 300 kW transmitters existing today were arrived at.

In 1991, the BBC shortwave site at Daventry closed down, leaving Skelton in Cumbria and Rampisham in Dorset as the homes for BBC shortwave transmitters, in addition to the third site at Woofferton.

Nowadays, in addition to the BBC and VOA, Woofferton transmitters are also currently used to relay Radio Japan, CBC, Radio Korea and RFE/RL. In addition to the ten shortwave transmitters at Woofferton, there are now additional ones for BBC Radio Shropshire on mediumwave (1584 kHz) and FM for coverage of South Shropshire.

Those are the facts about Woofferton, but to me personally at 56 years of age, Woofferton and the countryside surrounding it holds a semi-mystical fascination. My first knowledge of Woofferton goes back to reading the Guide to Broadcasting Stations published annually over forty years ago.

All shortwave stations over 1 kW were listed, according to frequency and wavelength, and at the back of the book they were listed by country and frequency. In the main text at the foot of the pages were notes stating "BBC Overseas transmitters are located at Skelton (Cumberland), Daventry (Northants), Woofferton (Shropshire) and Rampisham (Dorset)". Daventry has since gone, could Woofferton be the next?

My second experience was a result of travelling by train from Manchester to the south-west of England on holiday. The train left at 23.15 with a single locomotive engine hauling twelve carriages at a slow pace. Not getting a seat, I sat on a suitcase in the corridor and dozed off, only to be woken when the train stopped at signals. Checking my watch, it was 03.45 and looking out of the window there was a vast aerial field in sight. When the train moved, a sign saying "Woofferton Junction Signal Box" appeared. This was the Woofferton transmitter site that I had read about!

Ten years later, in 1970, I saw the transmitter site again whilst on holiday in the area. Situated in South Shropshire/North Herefordshire, with Wales in the west and England to the east, the countryside looked magnificent and it made a great impression on me, so much so that ten years later I left the north-west and settled in the Welsh Borderland at Knighton (Powys).

Living locally, a few years ago I had the pleasure of speaking to a resident of Woofferton, now in his mid-eighties, and he distinctly remembered the site being developed, for or by the BBC, whilst working as an agricultural worker during the war in 1943.

Every time I see the aerial arrays, which are visible for miles around, I remember the hot stuffy night in August 1960 and the diesel fumes from an overworked British Railways locomotive!
